

Raspberry Pi RetroPie - Single Mame Rom Boot for Dedicated Vertical Display Cabinets

I sharing my modified Retro Pie Image for testing. This is a first version of the image I use in my dedicated Galaga Cabinet. This version is pre-built to load Advanced MAME at startup and launch a single MAME rom via Attract Mode. This is a modified version of the image released by Floob.

This image does not include the Roms....

You can download my version below...

Download Instructions for the Raspberry Pi Image

1. Download 7Zip software from <http://www.7-zip.org/download.html>
2. Install the 7zip software on your computer.
3. Download the following files from the Stobbs.us website.

<http://stobbs.us/7z/stobbsterpi.7z.001>

<http://stobbs.us/7z/stobbsterpi.7z.002>

<http://stobbs.us/7z/stobbsterpi.7z.003>

<http://stobbs.us/7z/stobbsterpi.7z.004>

<http://stobbs.us/7z/stobbsterpi.7z.005>

<http://stobbs.us/7z/stobbsterpi.7z.006>

4. Put the 6 downloaded files into a new single folder.
5. Use 7zip to extract the first file "stobbsterpi.7z.001"
6. 7zip will combine all the files into a single zip file called "stobbster_pi_alpha_release.zip"
7. Use 7zip again to unzip "stobbster_pi_alpha_release.zip"
8. After the file is unzipped you will be left with the raspberry Pi Image file to flash on your MicroSD Card. "Galaga-Boot-Pi-NoROMS.img" Enjoy!
